## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I – claims 1-12 and 27 are drawn to a method for detecting an inhibitor of interaction between two or more binding partners, classified in Class 436, subclass 501.

Group II – claims 13-25 and 28-33 are drawn to an assay device, classified in class 422, subclass 50.

Group III – claim 26, is drawn to the use of binding partnerships, classified in class 435, subclass 7.1.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and (Group I – Group III) are related as product and process of use.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the device is not necessary to the practice of the claimed method, namely the inhibition of binding partner(s) interaction. The claimed method can be performed manually by hand in a micro-titer plate for example. Therefore the process can be practiced with another materially different product.

The inventions of Group I and Group III are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

Art Unit: 1641

In the instant case the different inventions have different operations and effects. Group I is a method of detecting an inhibitor of interaction between two or more binding partners via screening for binding dissociation, while Group II encompasses any and all possible utility of binding partner in inhibitor identification. Group II is not limited to binding dissociation but reads on interaction (non-binding, binding, and dissociation) methods. Thus the methods have diverse method steps, employ different reagents, possibly identifying different events.

3. Because these inventions are distinct for the reasons given above and have acquired separate status in the art as shown by their different classification, recognized divergent subject matter and because the search required for each invention is not substantially coextensive with the search required for the remaining invention, restriction for examination purposes as indicated is proper. Please note that the classifications in the restriction are illustrative only and do **not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes published foreign patents and applications as well as literature search, which in this case would be divergent for each of the claimed inventions. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Art Unit: 1641

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

6. Applicant is advised that the reply to this requirement be complete and must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO fax Center located in Crystal Mall 1. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 Fax number is (703) 308-4242, which is able to receive transmissions 24 hours/day, 7 days/week.
